

Snapchat API and Access Integration

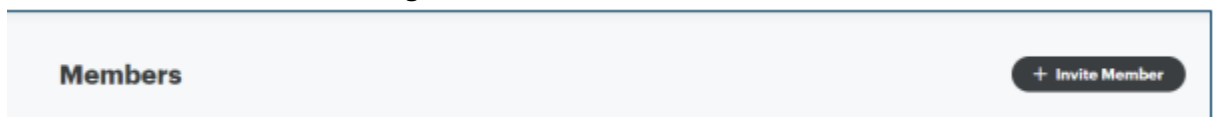

Before starting you should have received an email address for the account you want to grant access to. It will look like this: @annalect-data.info

To be able to access the data that needs to be extracted, an initial once per account setup needs to be handled. To be able to do that in Snapchat, it is important to follow the below steps.

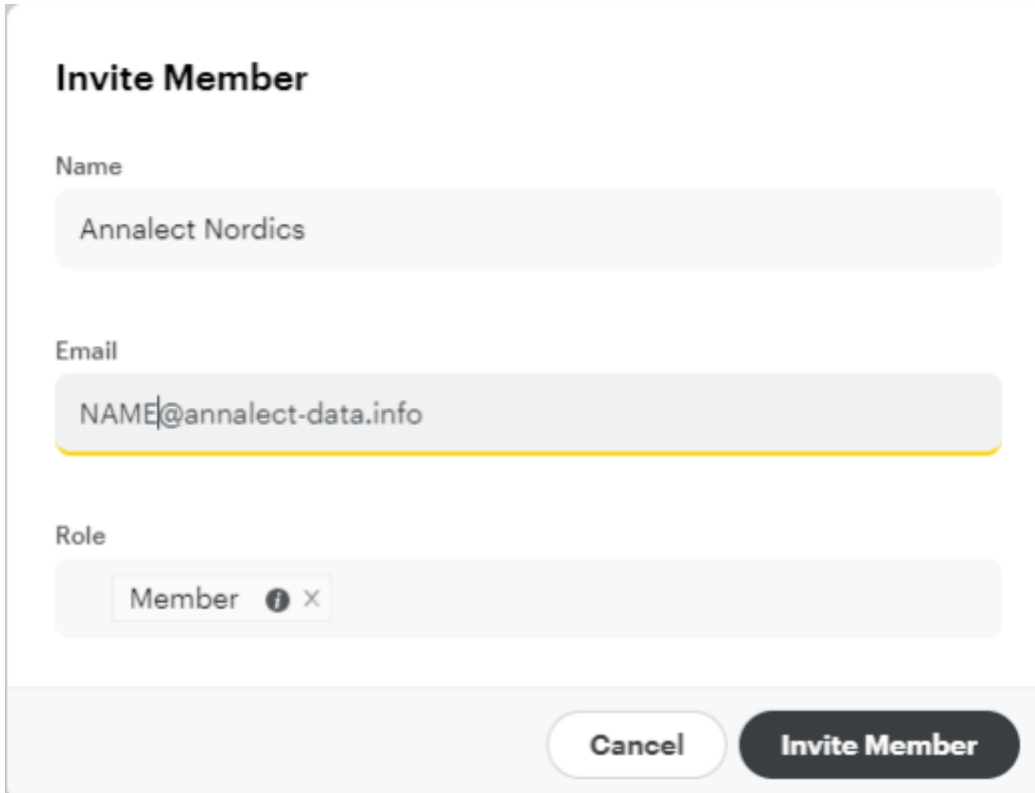

1. Log in to **business.snapchat.com** with your Admin rights.
2. On the left-hand side, go to **Members**

3. Click on Invite Member on the right side

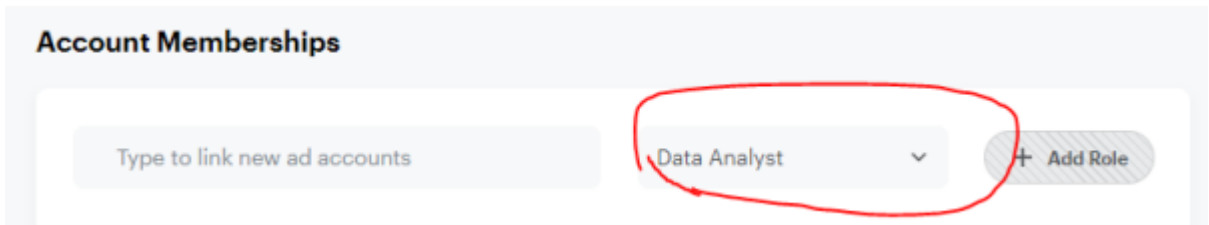

4. Enter the email address from the beginning and **Name** as below with the role as **Member** Click on **Invite Member**

The screenshot shows a form titled "Invite Member". It has three input fields: "Name" with the text "Annalect Nordics", "Email" with the text "NAME@annalect-data.info", and "Role" with a dropdown menu showing "Member". At the bottom right, there are two buttons: "Cancel" and "Invite Member".

5. Navigate to new members page and locate the Account Memberships Section Using the Data Analyst role add the **Annalect Nordic** member to the accounts you want to share.

The screenshot shows a section titled "Account Memberships". It contains a text input field with the placeholder "Type to link new ad accounts". To the right of this field is a dropdown menu showing "Data Analyst" with a red circle around it. Further right is a button labeled "+ Add Role".

6. It will be sending an invitation to the mail address, but the link expires relatively fast. Therefore, please let us know at dk.support@annalect.com after you finalized the integration, so we can accept it.

7. Once the invitation is accepted you can then proceed to finalize the onboarding. Copy the link of the organization to which the account belongs to. Then copy and insert account_id itself which you want to onboard

snapchat: ---- Select Client Source Ids----

Contacts: (From Agency - PHD):

Please make sure to follow all steps in [Guide](#)

Please make sure access has been granted to the following email before requesting onboard:

data_extract@annalect-data.info

Organization Id:	Account Id:	
<input type="text"/>	<input type="text"/>	<input type="button" value="Request Onboard"/>

Pending requests:

Loading pending snapchat requests ...

8. That should be it. The account will be onboarded and the data should be available next day for that account. Remember only one account per onboard can be onboarded, so if you want multiple accounts you would have to do it each time for every account.
